

INTERACTIVE PERSONAL PORTFOLIO

Master Brief, BRD, UX Flow, Design Workflow, Deployment Plan & OpenCode/Nemotron Prompt

Tujuan dokumen

Dokumen ini menjadi sumber kebenaran utama (single source of truth) untuk perancangan dan pembangunan website portfolio pribadi. Dokumen dirancang agar bisa disimpan di root repository dan dibaca oleh OpenCode/Nemotron sebelum coding dimulai.

1. Konsep Produk

Explore my work, not just my CV. Website diposisikan sebagai pengalaman interaktif yang memperlihatkan identitas profesional, karya nyata, cara berpikir, dan hasil pekerjaan - bukan hanya daftar skill.

Nilai utama: **Who I am -> What I build -> How I think -> What I achieved.**

2. Alur UX Utama

Landing -> Hero -> Selected Work -> Project Preview -> Case Study -> Live Demo / Source Code -> Contact

Alur sekunder: Landing -> About -> Skills -> Experience -> Project -> Contact

Mobile: Hero -> Selected Work -> About -> Skills -> Experience -> Contact

3. Struktur Website

Home - identitas, value proposition, CTA, social links.

Work - project utama dengan card interaktif dan case study.

About - storytelling singkat, bukan biodata panjang.

Skills - kemampuan berdasarkan kategori dan konteks, bukan angka kemampuan fiktif.

Experience - timeline interaktif.

Contact - CTA yang jelas untuk email, GitHub, LinkedIn.

4. Fitur Interaktif

- Hover micro-interactions pada project cards: subtle movement, image shift, metadata reveal, CTA transition.
- Project detail modal atau deep-linked detail view untuk case study.
- Interactive vertical timeline untuk experience.
- Scroll reveal dan smooth scrolling yang ringan.
- Responsive navigation/mobile menu dengan keyboard support.
- Optional pointer-aware visual effect yang tidak mengganggu konten.
- Semua animasi harus menghormati prefers-reduced-motion.

5. BRD - Business Requirements Document

Business Goals

Membangun personal branding; menampilkan project nyata; menjelaskan problem-solving; memudahkan recruiter/client menemukan CV dan kontak; menghasilkan website cepat, responsif, accessible, dan gratis untuk

deployment.

Target Users

Recruiter/HR, hiring manager/technical lead, client/potential collaborator.

Value Proposition

Website adalah bukti kemampuan dan cara berpikir, bukan sekadar CV online.

Success Criteria

Pengunjung memahami identitas profesional dalam sekitar 10 detik; project mudah ditemukan; case study kuat; mobile nyaman; tidak ada console/build error; accessibility dan SEO baseline baik; deployment repeatable; content mudah diubah tanpa merombak UI.

6. Requirements Konten

Hero: [NAME], [PROFESSIONAL TITLE], short statement, Explore My Work, Download CV, GitHub, LinkedIn, Email.

Project: title, description, category, technologies, image, problem, goal, role, approach, implementation, challenges, solution, result, lessons learned, live URL, source URL.

Skills: Frontend, Backend, Database, Tools, Other. Jangan membuat angka proficiency tanpa dasar.

Experience: year, role, organization/project, summary, achievements.

Aturan integritas: jangan mengarang pekerjaan, klien, penghargaan, metrik, sertifikasi, tanggal, atau hasil. Gunakan placeholder yang jelas seperti [YOUR NAME] bila data belum diberikan.

7. Design Direction untuk Stitch

Gaya: premium, modern, minimal, sophisticated, technical, human, editorial, highly usable. Hindari tampilan template portfolio generik, excessive gradients, excessive glassmorphism, neon berlebihan, terlalu banyak kartu bulat, clutter, dan animasi dekoratif yang tidak punya fungsi.

Prioritas desain: clarity -> typography -> hierarchy -> content -> interaction -> decoration.

Prompt Stitch

Buat personal portfolio interaktif dengan konsep "Explore my work, not just my CV". Bangun design system terlebih dahulu, lalu Home, Work listing, Project detail, About, Skills, Experience, Contact. Target desktop 1440px dan mobile 390px. Sertakan semantic hierarchy, accessible focus states, reduced-motion behavior, responsive navigation, project cards interaktif, case-study view, timeline, dan CTA contact. Gunakan palet netral dengan satu accent utama; tipografi modern; hindari efek berlebihan. Hasil desain harus terasa seperti personal brand profesional, bukan template. Ekspor atau dokumentasikan design rules ke DESIGN.md agar bisa dipakai coding agent.

8. Workflow Stitch -> OpenCode

BRD -> Stitch design system/prototype -> DESIGN.md -> GitHub repository -> OpenCode/Nemotron -> implementation -> QA -> GitHub -> Cloudflare Pages -> Production

Jangan langsung coding dari prompt kosong. Gunakan BRD + hasil Stitch + DESIGN.md sebagai konteks utama.

9. Arsitektur Teknis yang Disarankan

React + TypeScript + Vite; Tailwind CSS atau CSS architecture yang maintainable; animasi ringan hanya ketika dibutuhkan. Portfolio idealnya static-first sehingga tidak perlu backend untuk MVP.

Struktur folder:

```
src/  
components/  
sections/  
layouts/  
pages/  
data/  
hooks/  
lib/  
assets/  
styles/  
App.tsx  
main.tsx  
  
public/  
DESIGN.md  
README.md  
package.json  
vite.config.ts  
tsconfig.json
```

Pemisahan konten: profile.ts, projects.ts, skills.ts, experience.ts. Komponen UI tidak boleh menjadi gudang konten.

10. Deployment Gratis

Primary target: **Cloudflare Pages**. Repository di GitHub. Build utama: **npm run build**. Tujuan MVP adalah static deployment tanpa VPS, database, backend, atau CMS berbayar.

Flow: Local development -> Git -> GitHub -> Cloudflare Pages -> Production

11. Quality Gate

- Build production berhasil tanpa error.
- Tidak ada TypeScript error atau console error yang diketahui.
- Desktop dan mobile tidak memiliki horizontal overflow/overlap/clipping.
- Keyboard navigation, focus state, modal/dialog, dan reduced motion bekerja.
- SEO dasar tersedia: title, description, canonical, Open Graph, sitemap, robots.
- Asset teroptimasi dan dependency tidak berlebihan.
- Link CV, GitHub, LinkedIn, email, demo, dan source code berfungsi.
- Implementasi tetap setia pada Stitch/DESIGN.md.
- Tidak ada secret/API key di frontend source code.
- Deployment configuration siap dipakai di Cloudflare Pages.

12. MASTER PROMPT UNTUK OPENCODE + NEMOTRON

Simpan file PDF ini di root project, misalnya dengan nama **PORTFOLIO_MASTER_BRIEF.pdf**. Prompt berikut diberikan ke OpenCode. Prompt memaksa agent membaca dokumen sebelum coding dan menggunakan dokumen sebagai sumber kebenaran.

```
You are the lead frontend engineer, UI implementation engineer, accessibility engineer, performance engineer, and QA engineer for this repository. IMPORTANT: Before writing or changing application code, you MUST inspect and read the PDF file named PORTFOLIO_MASTER_BRIEF.pdf located in the repository root (or the closest matching portfolio master brief PDF). Treat the PDF as the primary product specification. Your execution order is mandatory: 1. Locate the master brief PDF. 2. Read the PDF completely enough to understand its requirements, UX flow, design direction, architecture, quality gates, and the intended Stitch -> OpenCode workflow. 3. Inspect the rest of the repository. 4. Inspect DESIGN.md and treat it as the visual design source of truth. 5. Produce a concise implementation assessment before making significant changes. 6. Build in small verified stages. 7. Run typecheck/lint/build after major stages. 8. Fix all errors before continuing. 9. Finish with a production-readiness review. SOURCE-OF-TRUTH PRIORITY 1. Portfolio master brief PDF 2. DESIGN.md generated from Stitch 3. Existing repository architecture and working code 4. Existing project content/assets 5. Your implementation judgment DO NOT invent personal information. Never fabricate employment, clients, awards, metrics, certifications, dates, project results, or education. When information is missing, use explicit placeholders such as [YOUR NAME], [YOUR ROLE], [PROJECT DESCRIPTION]. PRODUCT GOAL Build an interactive personal portfolio that communicates: Who I am -> What I build -> How I think -> What I achieved. The experience should feel premium, modern, minimal, technical, human, confident, and highly usable - not like a generic portfolio template. REQUIRED CORE EXPERIENCE - Strong hero with identity, role, value proposition, primary CTA and secondary CTA. - Selected Work as the centerpiece. - Interactive project cards. - Project case study experience covering problem, goal, role, approach, implementation, challenges, solution, result, lessons, live demo and source code. - About storytelling section. - Skills grouped by category without fake percentages. - Interactive experience timeline. - Strong contact CTA. - GitHub, LinkedIn, email and CV access. - Responsive desktop/tablet/mobile behavior. INTERACTION RULES Use interaction to improve comprehension, not as decoration. Allowed: subtle hover transforms, scroll reveal, smooth scrolling, project transitions, timeline expansion, responsive menu transitions, restrained pointer-aware effects. Avoid: heavy particle systems, extreme parallax, constant motion, large animation libraries without justification, animation that delays content. Respect prefers-reduced-motion. TECHNICAL DEFAULT Use the existing stack if appropriate. Otherwise prefer React + TypeScript + Vite and a maintainable CSS/Tailwind approach. Use strong typing and avoid any unless unavoidable. Avoid unnecessary dependencies. ARCHITECTURE Prefer separation of data from UI: src/data/profile.ts src/data/projects.ts src/data/skills.ts src/data/experience.ts Prefer reusable components such as: Navigation, Button, SocialLinks, SectionHeading, ProjectCard, ProjectGrid, ProjectModal, CaseStudy, Badge, SkillGroup, SkillVisualization, Timeline, TimelineItem, ContactCTA, Footer. Do not create giant components. ACCESSIBILITY Implement semantic HTML, correct heading hierarchy, keyboard navigation, focus-visible states, accessible dialogs, meaningful alt text, sufficient contrast, and reduced-motion support. RESPONSIVENESS Validate at least 390px, 768px, 1024px and 1440px widths. No horizontal overflow, clipping, overlap, or unreadable content. PERFORMANCE Optimize images, lazy-load where appropriate, minimize JavaScript and dependencies, avoid expensive scroll handlers, prefer GPU-friendly transforms, and keep initial load lightweight. SEO Implement title, meta description, canonical, Open Graph metadata, sitemap, robots.txt, semantic headings, and meaningful image alt text. SECURITY Never expose API keys, tokens, credentials, or other secrets in frontend source code. IMPLEMENTATION LOOP INSPECT -> IMPLEMENT -> RUN -> TEST -> FIX -> REVIEW -> CONTINUE. Do not make hundreds of lines of unverified changes. Do not rewrite unrelated working code. Do not replace a working architecture without evidence. STITCH FIDELITY Match Stitch/DESIGN.md in typography, spacing, color, component behavior, hierarchy, and responsive behavior. If implementation constraints require deviation, make the smallest reasonable deviation and keep the intent of the design. DEPLOYMENT TARGET The primary target is Cloudflare Pages with a static production build. Expected commands: npm install npm run dev npm run build npm run preview FINAL QUALITY GATE Before declaring the project complete, verify: - production build succeeds - typecheck succeeds - lint succeeds if configured - no obvious console errors - navigation works - project interactions work - project detail/case study works - mobile menu works - links work - CV link works - responsive layouts work - keyboard navigation works - reduced motion works - SEO metadata exists - images are optimized - no secrets are exposed - design remains faithful to Stitch - Cloudflare Pages deployment is ready FIRST ACTION Do NOT start coding immediately. First locate and read PORTFOLIO_MASTER_BRIEF.pdf, then inspect the repository and report a concise implementation assessment including: - current stack - current structure - missing pieces versus the PDF - likely implementation order - any blocking issue Only after that should implementation begin.
```

13. Cara Memberikan Prompt ke OpenCode

1. Taruh **PORTFOLIO_MASTER_BRIEF.pdf** di root repository.
2. Taruh hasil design Stitch, terutama **DESIGN.md**, juga di repository.

3. Buka OpenCode pada repository tersebut.
4. Kirim master prompt di atas. Jangan langsung meminta “buat website portfolio”. Biarkan agent membaca brief dan melakukan assessment terlebih dahulu.
5. Setelah assessment benar, lanjutkan implementasi secara bertahap: foundation -> hero -> work -> case study -> about/skills/experience -> contact -> QA -> deployment.

14. Prompt Lanjutan Setelah Assessment

Setelah OpenCode selesai membaca PDF dan memberikan assessment, gunakan instruksi lanjutan berikut:

Proceed with implementation according to the master brief and your assessment. Start with the smallest high-confidence step. Before changing files, state which requirement from the PDF you are implementing. After the change, run the relevant checks. Do not proceed to the next major stage until the current stage is stable. Preserve existing working code and avoid unnecessary dependencies.

15. Definition of Done

Website dianggap selesai ketika design, functionality, responsiveness, accessibility, performance, SEO, dan deployment semuanya bekerja sebagai satu produk. “Kode sudah dibuat” bukan definisi selesai.
